* HFCs and PFCs are classes of greenhouse gases that include many compounds. These columns may reflect the total emissions of multiple HFC and PFC compounds, each of which has a unique Global Warming Potential (GWP). Emissions of each gas are first multiplied by their respective GWP and then summed in the total CO2-equivalent column.

VERIFICATION INFORMATION

Verification Body: ENSR International

Basis of Verification Opinion:

The Sully-Miller Contracting Co. 2008 GHG inventory is for CO2 only. AECOM's verification review was based on the California Climate Action Registry (CCAR) General Reporting Protocol, Version 3.1, and was performed using standard engineering calculations and data quality assurance procedures, was conducted using data collected from the facility, and followed a sampling plan designed to minimize the risk of misstatement of the 2008 reported inventory. This verification is based upon the organization boundary defined as operational management control for all facilities. The verification was performed to the level of Reasonable Assurance. Based on this review, AECOM can verify the Sully Miller Contracting Co. GHG inventory (CO2 only) for 2008 without qualification.
